

# Lamar Instrumentation Association

PO Box 10043, Beaumont, Tx 77710

The Lamar Instrumentation Association would like to extend their appreciation Coastal Welding Supply in Beaumont for supplying such an informative and welcoming tour.

Tours like this allow for a better understanding of the field and duties of actual technicians, engineers and various members of the instrumentation team. This type of learning experience is something that simply can't be found within the confines of a classroom.

The opportunity to see one of your technicians utilize a gas chromatograph allows for us to better see the technology discussed in the analytical instrumentation class. We are then able to bring our personal experience back to LIT, sharing what we learned with other students, broadening others' knowledge as well.

The ability for students to interact and network with your employees allows them to feel more comfortable during the interview process, become acquainted with those who may some day be their coworker or supervisor and gain a better feel of exactly the conditions they will work in, again something unobtainable in a traditional classroom.

Thank you for taking the time out of your busy schedule to fit LIA members in, turning your facility into our temporary place of learning.
